[mail@vinitkumar.me](mailto:mail@vinitkumar.me), +91 8554862210, <https://github.com/vinitkumar>,  
<https://www.linkedin.com/in/vinitatlinkedin/>

## Skills

**Programming:** Python, JavaScript, TypeScript, Go, C, git

**DevOps:** AWS S3, EC2, Lambda, RDS, DigitalOcean, Heroku

**Web:** Django, FastAPI, PostgreSQL, MySQL, Sqlite, Redis, RabbitMQ, Elasticsearch, ReactJS

**Testing:** Unit Testing and TDD, Pytest for Python, Jest/Vitest for JavaScript

## Experiences

**Staff Software Engineer, KidsKonnect (prev SocialSchools B.V.)** *Feb, 2013 - Present*

**Major tech used: (Django, FastAPI, Laravel, PostgreSQL, Sql Server)**

**Pune, India**

I currently work as the Tech Lead in the Websites and Onboarding Team at kidsKonnect. I prefer writing clean and pragmatic code that delivers value to the product.

Following are [some of my work highlights](#) working with SocialSchools B.V. (acq by KidsKonnect in 2021) and now as a part of KidsKonnect:

- Implemented a highly scalable, distributed multi-tenant CMS in Python that powers over 2500 domains, providing a seamless experience for end users.
- Leading the development of Enrollment Form and CRM system to onboard new potential customers in the Day care and Primary Education market in The Netherlands.
- Developed and deployed an in-house monitoring and scanning tool to generate real-time uptime reports for all domains in our cluster, ensuring reliability and performance.
- Leveraged Celery and RabbitMQ to implement a distributed task queue for processing complex, compute-heavy background jobs and cron tasks, improving efficiency and speed.
- Improved the experience index for end users through targeted performance optimization and optimization of key metrics.
- Implemented a serverless provisioning system in AWS, reducing implementation time by 90% and providing greater flexibility and scalability.
- Built a media processing system that is capable of handling a wide range of video formats and scales seamlessly with changing workloads.
- Developed ReSTful APIs using the Django Rest Framework, enabling easy integration with web and mobile applications.
- Integrated performance monitoring tools like new relic and sentry to track key metrics and ensure optimal performance.
- Set up CI and automated checks for code quality, improving the reliability and maintainability of the codebase.

- Led the containerization of the codebase, allowing for local development on any operating system and providing greater flexibility for the development team.
- Implemented code review workflows and best practices, fostering a culture of collaboration and continuous learning within the team.
- Mentored junior colleagues on Django and React-based development, sharing knowledge and expertise.
- Implemented two-way communication between distributed nodes using JSON Web Tokens (JWT), improving the reliability and performance of the system.
- Enhanced the security of the application and worked closely with the cloud provider to mitigate potential attacks.
- Maintained close communication with the cloud provider's DevOps team and the CTO, ensuring that our system is always running at peak performance.
- Successfully scaled services to handle millions of requests per month, enabling the platform to grow and evolve as needed.
- Implemented testing workflows and best practices, encouraging the team to prioritize writing tests as a core part of the development process.
- Optimized cloud spending through the implementation of auto-scaling and right-sizing instances, maximizing the value of our investment in cloud infrastructure.

## Free Software

*Jan, 2010 – Present*

Volunteer software developer for Open Source projects in free time

- Implemented a [chatbot](#) in C.
- Core developer at [Django CMS](#).
- Primary author and maintainer of [json2xml](#) used by developers at [Google, Amazon, & Nasa among others](#).
- Primary author and maintainer of [node twitter](#), a twitter clone written in node and MongoDB.
- Primary author and maintainer of [white paper](#), a top-10 Jekyll theme.

## Education

### B.E. in Civil Engineering

*July, 2008 – April 2012*

Birla Institute of technology, Mesra

Specialization: Python Programming, Linux, C,

Graduation project: Use genetic algorithm to predict sedimentation rate for the reservoirs in India

## Recommendations

[List of recommendations](#) from past/current colleagues and collaborators in OSS projects.
